

Ask the Right Questions:

12 Capabilities to Look For in a Next-Generation SWG

Netskope Next Gen SWG can deliver the visibility and context you need to protect your data and operations—all without sacrificing security or user experience in the cloud.

1

Can I have consistent inspection and policy enforcement among users anywhere and data anywhere?

7

Can I control how data is transferred, manipulated, or accessed via cloud and web-based services and applications?

2

Do I have visibility of all SaaS and IaaS, including shadow IT, in use by all users, anywhere in my environment?

8

How confident am I in the authenticity of the user? Am I sure there hasn't been any credential compromise?

3

Can I determine how my users are using the data and via which apps and/or services?

9

Can I easily integrate incident response and forensics capabilities for SaaS- and web-based activity?

4

Can I determine the data's sensitivity both at rest and in transit?

10

Is my user experience performance-driven, frictionless, and transparent?

5

Do I understand the security posture of IaaS and PaaS?

11

Can I apply risk-based conditional access based on user behavior, data sensitivity, and application characteristics?

6

Do I understand and can I qualify the risk of SaaS and web-based applications being used in my environment?

12

Can I inspect and apply policy without "hair pinning" (i.e. routing back) to the data center, thus preserving my cloud service user experience?
