

Cloudrise Case Study

CUSTOMER SNAPSHOT

Cloudrise works with customers to enhance the security and privacy safeguards of their digital assets in complex, multi-cloud environments.

Providing seamless end-to-end cloud security solutions, Cloudrise offers a portfolio of cloud-focused advisory, technical consulting, and managed services. These highly effective solutions ensure repeatable and measurable risk reduction while solving security issues before they become incidents.

THE CHALLENGE

Jason Tesarz, VP Technology at Cloudrise, understands the importance of keeping customer data safe while adhering to critical compliance regulations. "Being a small company, resources can be limited. We found ourselves having to manually check cloud configurations for our own company, as well as for our customers," said Jason. The need for a solution that could automatically scan data against DLP policies was critical.

THE NEED TO ELIMINATE MANUAL SECURITY CHECKS

Before implementing Netskope, Cloudrise had limited visibility into what cloud apps were being used organization-wide and who was using them. On top of that, the security team was manually checking cloud configurations as a part of their daily workflow, causing production lags.

Netskope provided Cloudrise with advanced public cloud infrastructure security solution that helped them manage and reduce risk across their public cloud

"The visibility and control offered by Netskope allows us to make smart policy decisions that improve our users' experiences while allowing us to ensure we are appropriately managing our risk environment"

Jason Tesarz | VP Technology at Cloudrise

CHALLENGES

- Manually checking cloud configurations
- Compliance
- DLP

BENEFITS

- Meets industry and internal compliance standards
- Securing all cloud applications

SOLUTIONS

- Netskope for IaaS
- Continuous Security Assessment
- Storage Scan
- Netskope for IaaS (AWS)

deployments. Netskope helped them simplify the detection, remediation of threats and misconfigurations across their clouds to help prevent data loss, stop malware, and achieve regulatory compliance.

SPEED TO DELIVERY AND MAINTAINING COMPLIANCE

Implementing Netskope allowed Cloudrise to gain the visibility and control they needed across their multi-cloud environments to maintain best practices and standards compliance. They were driven to choose Netskope due to support for multi-cloud environments, scanning data at rest with DLP policies and overall security controls for our cloud applications. They now have faster turnaround of building and securing services in their cloud environments.

Netskope is the leader in cloud security. We help the world's largest organizations take advantage of cloud and web without sacrificing security. Our patented Cloud XD technology targets and controls activities across any cloud service or website and customers get 360-degree data and threat protection that works everywhere. We call this smart cloud security. Visit www.netskope.com to learn more.
