> " Netskope enables us to transform our security program to address the needs to our digitally transforming business."

CIO at a large insurance provider

Netskope is built for performance and scale

The Netskope Security Cloud is the fast and secure onramp for more than 230 million users around the globe. Netskope processes more than 50 billion cloud and web transactions a day and scans more than 60 million files.

Netskope is known for innovation and culture

Netskope is regularly called out for product innovation, for the industry contributions of our leaders and customers, and for company culture. In addition to numerous industry awards, Netskope inventors hold more than 75 patents worldwide, with more than 60 additional patents pending as of 2022.

Our team is a competitive advantage

Netskope was founded by early architects and distinguished engineers from security and networking leaders like Palo Alto Networks, Juniper Networks, Cisco, and VMware. As we've grown, our hiring philosophy has stayed the same. Hire people who are better than you, then empower them. Let them do what they know they can do. Let them be entrepreneurs. Give them the freedom to unlock their capabilities. This is how you build great products. This is how you build a great company. And this is how we have built Netskope.
