

Netskope and OneLogin

Organizations adopt the cloud because it lets employees get their jobs done more quickly and easily. But cloud adoption also makes it hard to manage employees' access and enforce usage policies as the traditional perimeter is gone. The Netskope integration with OneLogin allows you to discover and sanction cloud services and govern cloud activities and access based on identity and context, regardless of device or location. With Netskope and OneLogin, manage your cloud services in a closed-loop manner, bring all of your cloud services into your identity management fold, and ensure consistent cloud security and compliance.

QUICK GLANCE

- Find all cloud services in use
- Onboard and sanction high-use cloud apps
- Ensure compliance with reporting on usage and access
- Create and enforce security and access policies in real-time across sanctioned and unsanctioned apps
- Govern app activities versus blocking apps

THE NETSKOPE AND ONELOGIN INTEGRATION

Cloud services discovery and onboarding

Security teams can discover all cloud services in use with Netskope and on-board the popular and IT-approved ones with OneLogin, thereby managing the identity and security aspect for employees.

Access to sanctioned apps

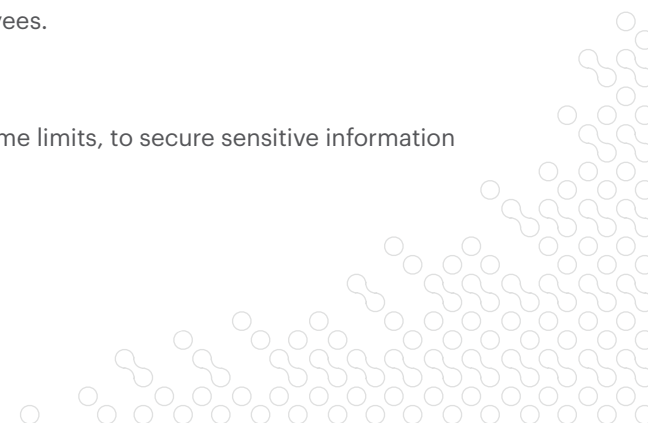

Automatically detect and prompt a streamlined workflow to install Netskope app onto device once logged in through OneLogin. This ensures full visibility and security of cloud usage by employees.

Cloud security policy enforcement across all devices and locations

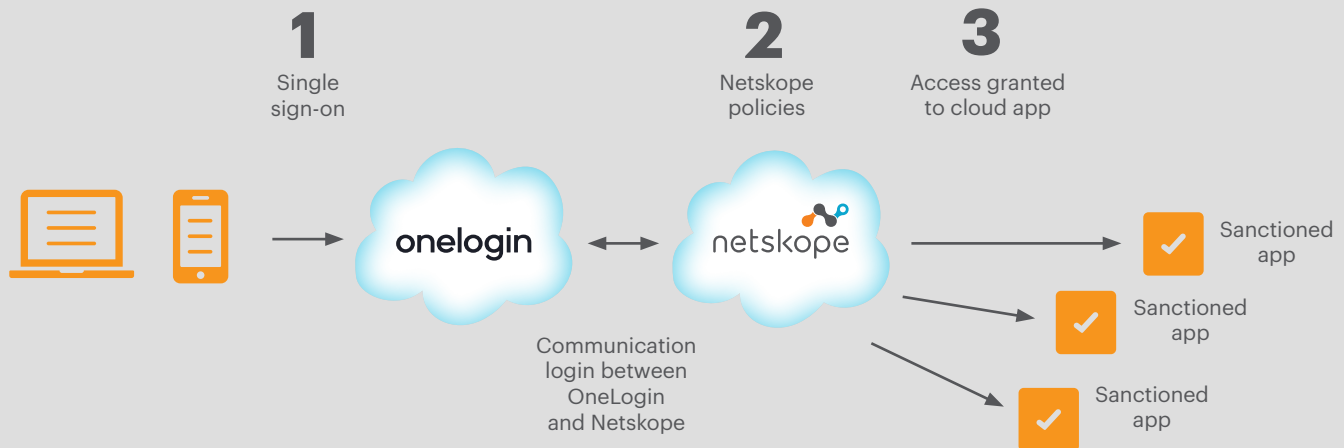

Set access and DLP controls, like multi-factor authentication and session time limits, to secure sensitive information and protect employees from online threats.

Comprehensive reporting

Report on all cloud usage for visibility and compliance.

How the Integration Works

Visibility and control over sanctioned apps. Enforce granular cloud security and access policies over sanctioned apps such as Microsoft Office 365, Google Apps for Work, Box, Dropbox, ServiceNow, and more.

CRITERIA	DESCRIPTION
Cloud services discovery	Understand all cloud usage and bring select apps into OneLogin management
Access to sanctioned apps by device attributes, status, etc.	Enforce controls and gain visibility into cloud use
Cloud security policy and access enforcement	Say “yes” to any device because you can govern access and protect data based on context such as identity and activities
Cloud usage reporting	Report on cloud usage to inform policy settings and audit for compliance

ABOUT ONELOGIN

OneLogin brings speed and integrity to the modern enterprise with an award-winning single sign-on (SSO) and cloud identity management platform. Its portfolio of solutions secures connections across all users, all devices, and every application, helping enterprises drive new levels of business integrity, operational velocity, and team efficiency across all their cloud and on-premise applications. The choice for innovators of all sizes such as Condé Nast, Pinterest and Steelcase, OneLogin manages and secures millions of identities around the globe.
