

# Netskope Device Intelligence

## Context Driven Security for Enterprise IT, IoT and OT Devices

Protect Internet-connected Things in your hybrid enterprise environments by classifying them, deriving context by controlling and orchestrating actions to defend against modern threats and enforce compliance.

### Why is Netskope the best choice?

The Netskope Device Intelligence solution utilizes HyperContext®, an agentless smart device security platform providing granular device context, and TruID™, a unique device identifier and authenticity rating technology, to discover managed and unmanaged devices on your corporate network. The solution further analyzes hundreds of parameters from the discovered devices and leverages the rich contextual intelligence for device classification, risk assessment, granular access control and network segmentation, facilitating zero trust security for connected devices.

### Unlocking the full power of AI/ML driven security

- **Device classification and visibility:** Agentless device discovery with rich contextual intelligence, enabling automated classification and device mapping, and providing deep insights into device activities and behavior.
- **Cybersecurity asset management:** Granular search and reporting for the discovered assets, comprehensive cybersecurity asset management with built-in asset inventory engine, true-up asset inventory and asset management database through integration with ServiceNow CMDB, VA, MDM, EDR.
- **Device risk assessment:** Continuous device monitoring to detect anomalies, generate unique device risk scores and map alerts based on device classification and tags. Streamlined SOC automation and enriched alert handling with SIEM and SOAR integrations.
- **Access control and segmentation:** Dynamic device grouping and micro segmentation based on context and real-time device behavior for granular, precise access to sanctioned devices and orchestrating actions using existing network systems such as firewalls and network access controls.

## Key Benefits and Capabilities

### Device discovery

Provides a complete picture of all devices connected to the network, along with their risk profiles, for effectively tracking and controlling the devices, and complying with the stringent audit and compliance policies.

### True device identity

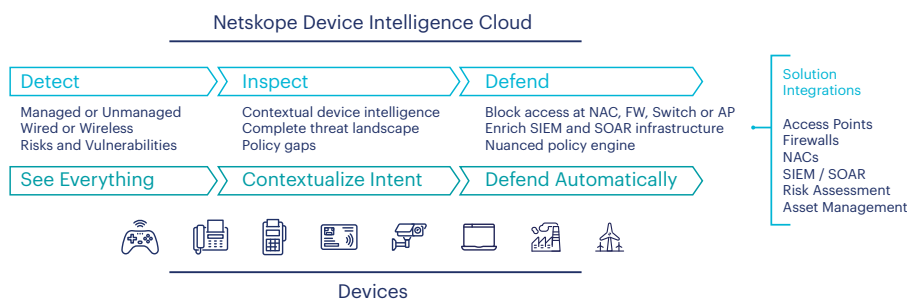

Analyses hundreds of device parameters through traditional fingerprinting technology to generate unique device identifiers and authenticity ratings. Devices exhibiting similar characteristics can be grouped together for unified policy enforcement and establishing the group's normal function and behavior.

### AI/ML driven risk assessment

Recognizes anomalous behavior at the device level and offers insights and analytics about device-level risks, threats, and best practices around mitigating threat profiles.

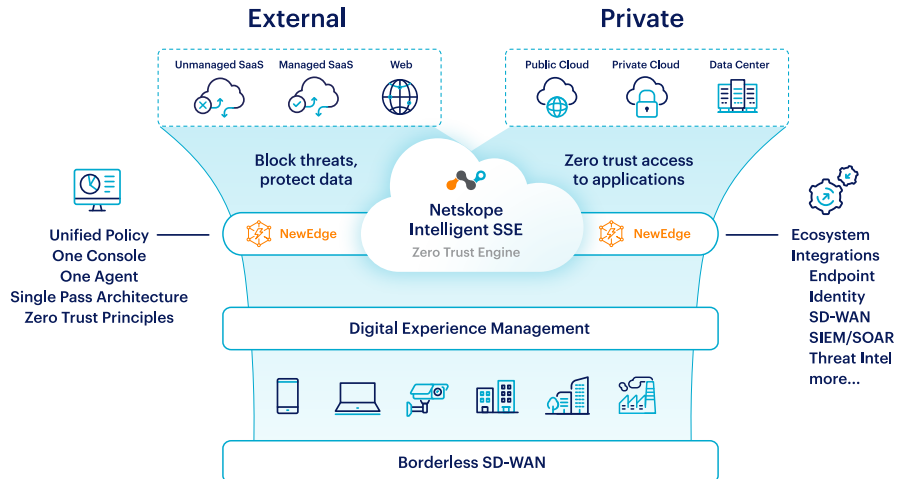

### Reduced attack surface

Dynamically groups devices within secure zones or micro segments to isolate risky devices and prevent lateral movement of threats.

## The Netskope Difference

Netskope helps you reduce risk, accelerate performance, and provide unrivaled visibility into any cloud, web, and private application activity. To empower safe collaboration, Netskope reliably balances trust against risk with granular controls that adapt to changes in your environment. The Netskope platform protects against advanced and cloud-enabled threats and safeguards data across all vectors (any cloud, any app, any user). A single-pass architecture delivers a fast user experience and simplified operations.

| YOUR NEEDS                             | THE NETSKOPE SOLUTION   |
|--|---|
| Zero trust access                      | Netskope Device Intelligence extends zero trust to IT, IoT and OT environments through adaptive access controls, micro segmentation and continuous risk assessment of every authenticated device.   |
| Operational compliance                 | Netskope Device Intelligence acts upon the rich device telemetry to identify and close security gaps, and meet the regulatory compliance needs.   |
| Actionable alert intelligence          | Netskope Device Intelligence responds to security incidents through integration with SIEM platforms. Alert handling is automated at scale through SOAR runbooks.  |
| Bolster security and access management | Netskope Device Intelligence seamlessly integrates with network security systems, including firewalls, network access controls and access points for facilitating secure access to the devices.   |
| Align with SASE vision                 | Netskope Device Intelligence aims to bring all the connected devices under the unified Secure Access Service Edge (SASE) framework for streamlined visibility, policy enforcement and incident management of distributed devices, from a centralized management platform. |

Netskope, a global SASE leader, helps organizations apply zero trust principles and AI/ML innovations to protect data and defend against cyber threats. The Netskope platform provides optimized access and real-time security for people, devices, and data anywhere they go. Learn how Netskope helps customers be ready for anything on their SASE journey, visit [netskope.com](https://www.netskope.com).
