

Netskope Security Advisory

Security Advisory (Public Disclosure)

Netskope Security Advisory – Netskope Client is impacted by Out-of-Bounds Read vulnerability

Security Advisory ID:	NSKPSA-2025-001	Severity Rating:	Low
First Published:	Aug 13, 2025	Overall CVSS Score:	2.0
Version:	1.0	CVE-ID:	CVE-2025-5941

Description

Netskope is notified about a potential gap in its agent (NS Client) in which a malicious actor could trigger a memory leak by sending a crafted DNS packet to a machine. A successful exploitation may require administrative privileges on the machine, based on the exact configuration. A successful exploit can potentially result in user-controllable memory being leaked in a domain name stored on the local machine.

Affected Product(s) and Version(s)

Product Name: Netskope Client
Affected Platform: Windows
Affected Versions: All versions below R129

CVE-ID(s)

CVE-2025-5941

Remediation

Netskope has released a security patch for the issue. Please see below

- Patch versions: R129 and above

Workaround

There are no workarounds available at this time

General Security Best Practices

Netskope recommends using security hardening options available in the product and configuring them to harden the security of a Netskope tenant-
<https://docs.netskope.com/en/secure-tenant-configuration-and-hardening/>

Special Notes and Acknowledgement

Netskope credits Thomas Brice for reporting this flaw.

Exploitation and Public Disclosures

Netskope is not aware of any active exploitation of the security issue.
